

AMENDMENT TO SPECIFICATION

Please amend the paragraph beginning on line 4 of Page 11 of the Specification as follows (Note the addition of reference numeral 47):

Provided next is a light assembly 40. The light assembly includes a generally rectangular aperture 42. The aperture is provided in the front wall adjacent to the upper edge and closer to one side wall than to the other side wall. The light assembly also includes an interior illumination panel 44 and an exterior illumination panel 46. The exterior surfaces are coplanar with the plastic sheets of the front panel. A lithium battery 47 is operatively coupled to the panels for the illumination thereof. The light assembly also has a first switch 48. The first switch is extendable upwardly of the upper edge of the front wall. In this manner the panels are inactivated when the lid is in the closed orientation to depress the first switch. The first switch extends upwardly when the lid is in the opened orientation. In this manner panels are activated to illuminate interior and exterior of the cooler. The light assembly also has a second switch 50. The second switch is located adjacent to the exterior panel. The second switch is adapted to be pressed by a user to inactivate the panels and to activate the panels to illuminate interior and exterior of the cooler.
